## **BART ACCESSIBILITY TASK FORCE**

### **PATH OF TRAVEL POTENTIAL OBSTACLES: MITIGATION MEASURES**

#### **CHECKLIST FOR BART CONSTRUCTION PROJECT MANAGERS**

**May 26, 2016**

#### **INTRODUCTION:**

There were some path of travel issues during various BART construction projects in 2015-16. It was thus agreed on April 5, 2016 with the BATF and BART Planning and Development and Operations, that a checklist would be developed for BART construction managers. This checklist is to be used for all size projects prior to the start of construction so that managers can "walk the site" and determine if there will be obstacles to the path of travel; and if so, to ensure adequate mitigation measures have been planned as well as their implementation.

#### **Lighting:**

Will lighting be reduced? If so, what will be done to bring the lighting back to the original level? Many visually impaired people require more lighting than the CBC (California Building Code) minimum requirements.

#### **Fencing:**

Will chain link fencing (e.g. Cyclone™ fencing) be in the path of travel? Gray fencing can blend into the back ground of gray cement walls or floors. What will be done to ensure the visibility of the fence?

#### **Fare Gates:**

Will any fare gates be blocked? If so, does this include either/or the swing gate or the wide fare gate? If yes, how will wheelchair riders access the station? El Cerrito Plaza is an example of this situation in April 2016.

#### **"Trench Ramps":**

Does the path of travel cross over a trench or similar opening? If so, describe what is covering the excavation. Is it easily wide enough for a large wheelchair? What is the "angle of approach" leading up to the cover? What color is used to delineate the edges? Are the edge colors clearly contrasting with the other nearby material?

#### **Construction Barricades (e.g. "K Rails" etc.):**

What type of barriers will be erected to keep people away from the construction area? Do they re-direct the path of travel? If so, how will the visually impaired be informed and aware of the detour?

**Signs**

Are there signs in the path of travel? Is it possible a blind person could walk into them? Are they constructed so that a person with a white cane could have the cane pass through the "legs" of the sign, thus allowing the cane user to run into the sign?

**Scaffolding:**

Will scaffolding be over the path of travel? If so, are the poles padded to protect those who might hit the poles? Is there a clear path of travel through the poles? Is it clear how a person is to navigate around the poles, especially for the visually impaired?

**Hearing Impaired:**

During construction, will it be necessary to verbally direct passengers around an obstacle on a temporary basis? If a construction worker will be verbally directing passengers, how will this communication be made to the hearing impaired?

**Level Surfaces:**

During construction, or when a path of travel has been re-opened in a construction area, will the surface be smooth, i.e. free of tripping hazards from re-paving and can a wheelchair easily cross the area?

**Wheelchair Accessible Ticket Machines**

Will a wheelchair accessible ticket machine be blocked? If so, an alternate accessible machine is needed

**Replace Station "Furniture":**

Upon the project's completion, will the station "furniture" (e.g. benches, trash cans etc.) be placed back in their original locations? This is important, if at all possible, as such furniture is often used as landmarks for the visually impaired using canes.

**CONCLUSION:**

The BATF believes that the above mitigation measures will make accessing BART stations safer for disabled riders; as well as for inattentive walkers. BATF members are quite willing to work with staff and participate in walking with the construction managers prior to the start of projects.

**Approved by the BATF May 26, 2016**
